Sierra 1500 Series 2006t

Features of the N.C.N.S

- 5 Digit Keypad - 4 Digit Combination Code
- Thousands of Code Combinations
- Set your Own Code or Use Factory Settings
- Manual Arming or Automatic Arming after 30 Seconds once ignition is switched off
- Unauthorized Delay for 5 minutes if invalid code is entered 3 times
- For Both Keyed and Pushbutton Start ignition Vehicles

▶▶ HOW it works?

The N.C.N.S has a mini engine cut unit that operates through a keypad which requests a code input to identify the driver while connected to an engine blocker. The engine blocker is a discrete electrical device which prevents the engine from running until the correct code is entered. This device overrides the use of programmed keys until it grants access to the driver. Without the code, not even a stolen key will work.

THE NO CODE NO START AUTOMOTIVE ANTI- THEFT SYSTEM

An illuminated code-entry keypad device designed to restrict unauthorized drivers from operating the host vehicle it is installed on. Works on cars, trucks, motorcycle, ATV's, etc.
